The **U-PAD** protective pad is made up of recycled rubber. It is placed under the pedestal and provides additional acoustic values. It helps protect the substrate if it is subject to puncturing.

Additional features:

Stabilizes the laying of pedestal on raw/granular concrete. Provides a better foundation and a homogeneous distribution of loads on support.

Significantly reduces slippage of the pedestal on an inclined or non-inclined surface.

In case of need, the U-PAD can be used as risers and fill in differences in levels (e.g. different levels of waterproofing membranes).
